

## DBNZ Tech Tip Of The Week

### Metallic Bright Blue

is a new special effect toner that has been introduced to the DeBeer WaterBase 900+ Series portfolio. Its advanced formulation ensures for even better colour matching abilities for bright blue toned OEM cars, particularly the blue colours used in newer vehicle models

### Superior Colour

The blue metallic particles used in the Metallic Bright Blue make it possible to mix more saturated blue effect colours. The toner ensures a deeper and richer effect colour can be achieved to produce a perfect colour match and striking results.

### MM 9575

Please be aware that the 900+ toner 9575 (*unlike the other 900+ toners*) does require to be shaken thoroughly for 2 minutes before being used as a toner in a mixed colour.

This is due to the weight of the metallic combined with the blue tint within the toner.

Failure to mix the toner thoroughly may effect the colour being mixed. This could potentially result in an unwanted colour tone throughout the mixed colour.

For this reason a supplementary information label acts as a reminder to all to ensure the correct amount of product shaking occurs.

### **MM9575 Metallic Bright Blue**

#### **\*\*IMPORTANT NOTICE\*\***

**Due to the weight of the metallic content in this toner, MM9575 needs to be shaken thoroughly for 2mins before mixing colour.**  
(note: not in a paint shaker)

**Alternativity you may need to remove the lid and stir product with a clean mixing stick to ensure that the toner is fully mixed.**
